Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1918 Excerpt: .varies from 16 to 90 angstrom units to the millimeter at the center of the spectrum. In connection with the classification of stellar spectra a number of photographs have been made with a Koch microphotometer of the intensity curves of some of the pairs of lines employed in the comparison. There are numerous practical difficulties connected with the use of this instrument for lines as narrow and as short as those in stellar spectra, and it is doubtful whether the accuracy obtained is of so high an order as to justify the use of so laborious a method for stellar classification. It is probable, however, that it might be used to advantage in the selection of standard stars of reference in which a knowledge of the absolute intensities of certain spectrum lines would be of great value. Communications from the Mount Wilson Solar Observatory, to the National Academy Of Sciences. No. 24 Reprinted from the Proceedings of the National Academy or Sciences Vol. 2, p. 147, March, 1916 INVESTIGATIONS IN STELLAR SPECTROSCOPY. II. A SPEC TROSCOPIC METHOD OF DETERMINING STELLAR PARALLAXES By Walter S. Adams MOUNT WILSON SOLAR OBSERVATORY. CARNEGIE INSTITUTION OF WASHINGTON Received by the Academy. Febmuy 8. 1916 The question whether the intrinsic brightness of a star may not have an appreciable effect upon its spectrum is one with important applications in astronomy. If two stars which have closely the same type of spectrum differ very greatly in luminosity it is probable that they...
