Brand New Book ***** Print on Demand *****.This book was written for elementary school students, with the goal of developing the problem solving skills necessary to excel in school and on standardized tests. Some students are naturally gifted in mathematics and others seem to struggle with it all of their lives. The main difference between these two types of students is their level of mathematical maturity. Although there is no single agreed upon definition of mathematical maturity, I like to define it as one's ability to analyze, understand, and communicate mathematics. The good news is that mathematical maturity can be increased naturally. So when should someone begin trying to increase their level of mathematical maturity? The sooner the better! If you are a middle school student, then completing the 56 tests in this book is a great way to facilitate this process. Practicing with this book will result in a strong foundation in deductive reasoning, analytical thinking, and solving problems outside the box. You will be trained to think quickly, carry out procedures without making careless errors, notice details within a short period of time, and detect inconsistencies. In addition you will be able to apply what you learn here to new situations as they arise. This book contains verbal, visual, and numerical questions involving numbers, processes, and tables. After completing the tests in this book you should notice an increase in your level of mathematical maturity. This means you will be able to understand and communicate mathematics more effectively and with less effort. You will save yourself countless hours of frustration for many years to come.
